Test Comments: *This site was planted on my second day of plot seeding. Wet weather through June slowed crop development, but also recharged dry soils. Unfortunately, very little rain fell here in July and Aug. The field surrounding the plot site yielded 175-180 bpa at 19% moisture, but Doug noted that one more rain in July would have bumped averages up to 200 bpa.*

† See last page for footnote information. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
