**Test Comments:** This location received excessive rainfall late May and June, was drier in July, then had 5" rain in August. Cooler than normal temperatures were ideal for good pollination. Doug and Nathan are quite pleased with yields this fall. Yields dropped in the lower areas of this level site, as a result of overly saturated soils in June. However, every plot still looked great at harvest.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
