Test Comments: Signs of good stalk health in the plot as much of the corn was close to 10 feet tall and retained tassels. Grain moistures have been around 20 percent, slightly than higher other plots harvested this year. This area had enough rain for the corn all year and the high yields reflect that. Grain has been slow to dry this fall which has delayed harvest in the area.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
